HEALTHCARE ECOSYSTEM

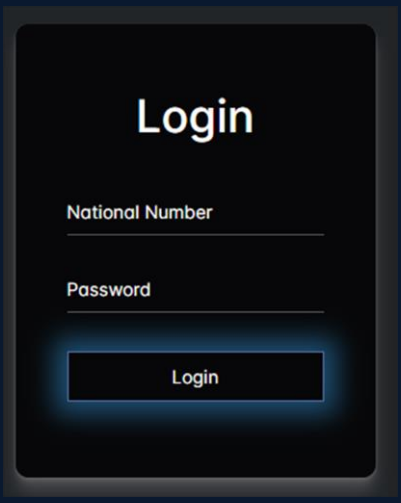
Full-Stack Healthcare Management & Unified Patient Records

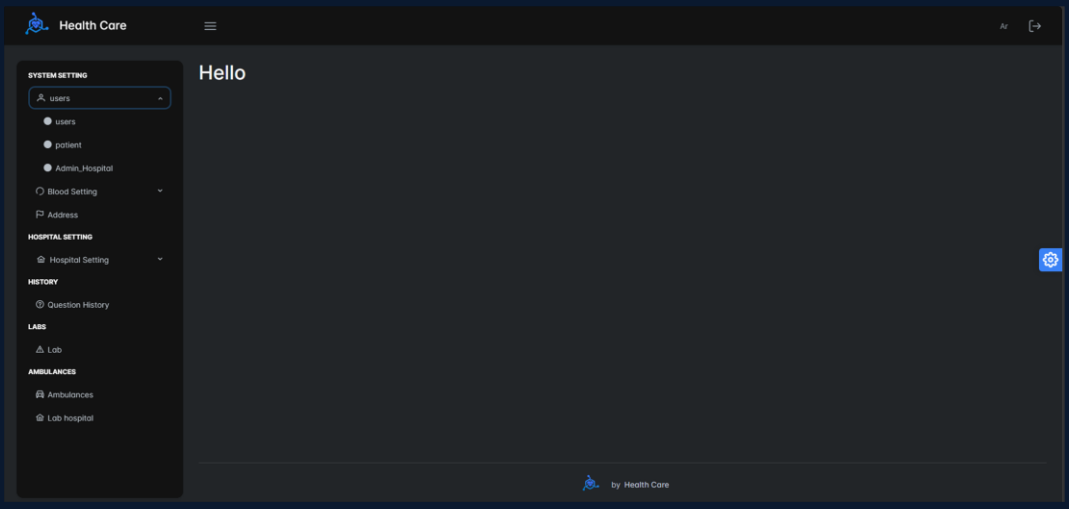
PROJECT OVERVIEW

The HealthCare Ecosystem is a comprehensive digital transformation project for medical facilities. It bridges the gap between disparate hospitals by centralizing patient records and automating clinical workflows. Patients can book appointments, track medical history, and request emergency services seamlessly through a modern web interface.

FRONTEND EXCELLENCE (ANGULAR)

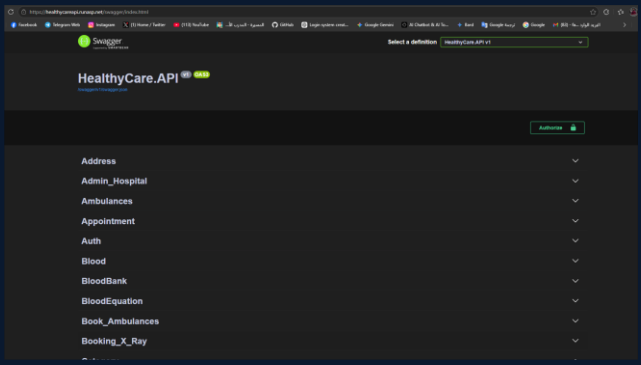
Built with Angular, the**Admin Dashboard**provides a command center for hospital administrators. It features real-time data visualization, patient management modules, and intuitive scheduling interfaces optimized for high-volume clinical environments.





BACKEND ARCHITECTURE (.NET 8)

The core of the system is a high-performance .NET Web API following **Clean Architecture** principles. It ensures secure data handling, HIPAA-compliant storage, and robust synchronization logic for inter-hospital connectivity.



TECHNICAL FOUNDATION

- .NET 8 Web API
- Angular 17+
- Entity Framework Core
- SQL Server
- Clean Architecture
- JWT Security
